
MacClean 3 || Fact Sheet

Product Summary

MacClean 3 comes to initiate a new round of spring cleaning on your Mac with the features of cleanup, optimization, privacy care and security protection. It cares more about your Mac security by deep scanning the malicious threats in your Mac, so that you can enjoy a cleaner & safer working environment – all for **FREE**.

Product Features:

MacClean 3 is made up of two modules: Cleanup and Utilities. Below will give you a detailed explanation for each part.

- **Cleanup**

System Junk

Safely removes the useless data generated while running system for better performance, including cache files, logs files, app leftovers, etc.

Internet Junk

Cleans up all the junk files from Safari, Firefox and Google Chrome, such as cookies, cache files, download histories, etc.

Malicious Cookie *New!*

Scans the trace of malicious cookies and removes them to avoid cookie deception, Internet privacy leaks and vicious cookie tampering.

Privacy Issue *New!*

Casts solid protection upon all your private and sensitive data, like the usage of App, recently used documents and chat histories.

Security Issue *New!*

Checks all potential risks of your Mac with 3 scan modes (Full Scan, Quick Scan, and Custom Scan), and move those threats to the Quarantine, to prevent your Mac from being further infected.

● Utilities

Old & Large Files

Finds your large & old files and sorts them with multiple filters to let you easily remove the unwanted ones.

Duplicates Finder

Locates & finds out all your identical files or folders on Mac and offers an option to get rid of the duplicate ones.

Language File Clean

Analyzes all the language files saved in multilingual apps, and lets you delete the ones that you won't use.

File Eraser

Offers you 3 standards to erase any unwanted files/folders and ensures the sensitive data are securely removed without leaving a trace.

App Uninstaller

Completely uninstalls any unused apps without any associated files or traces left behind in your Mac.

iPhoto Clean

Deletes the thumbnail junks of images generated when iPhoto auto rotated your photos.

Binary Junk Remover

Removes all unnecessary binaries to reduce the size and boost performance of apps.

Extension Manager

Manages all installed extensions, plug-ins and add-ons on your Mac, and keeps the necessary ones and disable/remove the rest.

Trash Sweeper

Completely empties your Trash bin to make sure all files are securely deleted.

iOS Backup Cleanup *New!*

Cleans unneeded iTunes backups out of your Mac and reclaim gigabytes of more free space.

Quarantine *New!*

Isolates the suspicious files in this area to prevent your Mac being infected, and allows you to make a choice for completely deleting or putting them back.
